

## Table of Contents

	Page
<b>Forward to 1<sup>st</sup> Edition</b> .....	7
<b>Forward to the 2<sup>nd</sup> Edition</b> .....	10
<i>An opinion concerning BET and other similar models</i> .....	10
<i>An opinion on the way around the BET problems</i> .....	10
<i>Comments about problems with many publications</i> .....	12
<i>What's new in this edition?</i> .....	13
<i>Where is all the thermodynamics?</i> .....	14
<b>Chapter 1 - An Overview and some uninteresting History of Physisorption</b> .....	16
<i>Introduction</i> .....	16
<u>What do you want?</u> .....	16
<u>Scope and Terminology</u> .....	17
<i>General Description of Physisorption</i> .....	21
<i>Measuring the Surface Area by Physisorption</i> .....	22
<i>Preliminary Analysis</i> .....	24
<u>Classical Classifications of Adsorption Isotherm Types</u> .....	24
<u>The "B point" Analysis</u> .....	28
<u>The Inflection Point Method</u> .....	28
<u>Characterization of Hysteresis Loops</u> .....	29
<u>What is the "Henry's Law" assumption?</u> .....	34
<u>The BET theory</u> .....	37
Original Assumptions .....	37
The BET Linearization for analysis .....	38
BET Problems and Restrictions .....	39
The Bottom Line for the BET - Don't Use It .....	39
<u>The "absolute method" by Harkins and Jura</u> .....	40
<u><math>\chi</math> theory and other recent theories that do yield monolayer equivalence <math>n_m</math></u> .....	40
<u>Relating <math>a</math> (or <math>\bar{A}</math>) and <math>A_s</math> to <math>n_m</math></u> .....	41
<u>The advantages of the chi theory formulation</u> .....	44
<u>Using standard curves to obtain the <math>n_m</math></u> .....	46
<i>Determining Porosity by Physical Adsorption</i> .....	46
<u>Micropore Analysis</u> .....	46
BET analysis and N-layer formulation .....	46
Standard curve interpretation .....	47
N-layer according the chi theory .....	48
<u>Mesopores</u> .....	49
Obtaining Pore Radius from the Two Slopes .....	51
The Use of the Kelvin-Cohen Equation Value of $r_p$ for Mesopores .....	52
<u>Macropores</u> .....	53
<i>Statistical Treatment of Isotherms - error analysis</i> .....	53
<i>Adsorption Types in Standard Isotherm Transformations</i> .....	54
<i>Summary of Chapter 1</i> .....	55

<i>What's Next?</i> .....	56
<i>Chapter 1 References</i> .....	56
<b>Chapter 2 - Measuring the Physisorption Isotherm</b> .....	59
<i>Introduction: Equipment Requirements</i> .....	59
<i>The Volumetric Method</i> .....	60
<u>Equipment Description</u> .....	60
<u>Determination Method</u> .....	61
<u>Error Analysis for the Volumetric Method</u> .....	64
Design Errors .....	64
Boundary errors between $V_2$ and $V_3$ .....	64
Sample temperature control: .....	64
Poor Calibration of $V_1$ .....	64
Molecular Flow Versus Viscous Flow .....	65
Equation of State Errors .....	66
Temperature Control of the Sample .....	66
Limit of Detection .....	66
<u>Advantages and Disadvantages of the Volumetric Technique</u> .....	67
<i>The Gravimetric Method</i> .....	67
<u>Equipment Description</u> .....	67
<u>Error Analysis for the Gravimetric Technique</u> .....	70
<u>Advantages and Disadvantages of the Gravimetric Technique</u> .....	71
<i>General Error Analysis - Common to Both Volumetric and Gravimetric</i> .....	72
<u>Pressure and Temperature Measurements</u> .....	72
<u>Kinetic Problems</u> .....	73
<u>Sample Density Problems</u> .....	74
<i>Calorimetric Techniques</i> .....	74
<u>Adiabatic Calorimetry</u> .....	74
<u>Measuring the Isothermic Heat of Adsorption</u> .....	75
<u>The Thermal "Absolute" Method</u> .....	76
<u>Differential Scanning Calorimetry</u> .....	77
<i>Arnold's Adsorptive Flow System</i> .....	79
<i>Carrier Gas Flow Method</i> .....	81
Engineering Aspects: Carrier Gas Flow Method .....	81
<i>Chapter 2 References</i> .....	85
<b>Chapter 3 - Interpreting the Physisorption Isotherm</b> .....	87
<i>Objectives in Interpreting Isotherms</i> .....	87
<i>Surface Area Determination from Isotherms</i> .....	90
<u>The BET Analysis</u> .....	90
<u>Chi Plot Analysis</u> .....	92
<u>Non-Local Density Functional Theory</u> .....	93
<u>Dubinin, et. al. Method of Determining Surface Area</u> .....	94
<u>Tóth T-equation isotherm</u> .....	95
<u>The Harkins-Jura Absolute/Relative Method</u> .....	96
<i>Porosity Determinations from the Isotherm</i> .....	96

<u>Micropore Analysis</u> .....	97
<u>Mesoporosity Analysis</u> .....	99
<i>Isotherm Fits which Yield Relative Numbers for the Surface Area</i> .....	101
<u>Langmuir Isotherm</u> .....	101
<u>Freundlich Isotherm</u> .....	103
<u>Polanyi Formulations</u> .....	104
<u>deBoer-Zwicker Formulation</u> .....	104
<u>The Frenkel, Halsey, Hill (FHH) Isotherm</u> .....	105
<u>Analysis Using Standard Isotherms</u> .....	105
<u>Principal Problem with Standard Curves</u> .....	106
<u>Standard Isotherms</u> .....	106
The $\alpha_s$ -Curve Standard .....	106
The t-Curve .....	107
IUPAC Standards on Silica and Carbon .....	107
RMBM Carbon Standard .....	107
KFG Segmented Standard Carbon Curve .....	108
Cranston and Inkley Standard for Pore Analysis .....	108
Thoria Standard Curves .....	108
Standard Curves for Lunar Soil .....	108
<u>Tables of standard isotherms</u> .....	109
<i>What about those type VI isotherms?</i> .....	119
<i>Summary of Interpreting the Physisorption Isotherm.</i> .....	120
<i>Chapter 3 References</i> .....	122
<b>Chapter 4 - Theories behind the chi plot</b> .....	126
<i>Introduction - Historical Background</i> .....	126
<i>Theory Behind Chi Plots</i> .....	126
<u>The Quantum Mechanical Derivation of the “Simple” Chi Equation</u> .....	126
<u>A Particle in a Box with a Tooth</u> .....	128
<u>Converting <math>\gamma_s</math> to different conditions</u> .....	136
<u>What is <math>a</math>? ... and is the Hard Sphere approximation appropriate?</u> .....	138
<u>The Energy Correction</u> .....	140
<u>In summary of <math>\chi</math> theory so far:</u> .....	142
<u>The Disjoining Pressure Derivation</u> .....	142
<u>The Meaning of <math>\Gamma_m</math> in the Hard Sphere Model</u> .....	144
<i>Heterogeneous Surfaces</i> .....	146
<u>The Additive principle of Chi Plots</u> .....	146
<u>Insensitivity for <math>\chi \geq \max \chi_c</math></u> .....	148
<u>Reformulation for a Distribution of <math>E_a</math> Values</u> .....	148
<i>Heats of Adsorption</i> .....	149
<u>Isosteric Heat of Adsorption, <math>q_{st}</math></u> .....	149
<u>The Integral Heats of Adsorption</u> .....	150
<u>Heats of Adsorption from BET plot</u> .....	151
<i>Adsorption of Binary Adsorption - More than One Adsorbate</i> .....	157
<u>Method 1- Adjusting the Grand Canonical Ensemble</u> .....	158
<u>Method 2 - Using the <math>n</math>-layer Analysis</u> .....	164

<i>The Thermodynamics of the Spreading Pressure</i> .....	167
<u>Gibbs' Phase Rule in Systems with Surfaces</u> .....	167
<u>Derivation of the Spreading Pressure</u> .....	168
<u>The Olivier monolayer criterion</u> .....	170
<u>Is the Chi Plot Compatible with the Freundlich and Dubinin Isotherms?</u> .....	171
<i>Chapter 4 References</i> .....	172
<b>Chapter 5 - Comparison of the Chi Equation to Measurements</b> .....	175
<i>Comparison to Standard Isotherms</i> .....	175
<u>The <math>\alpha</math>-s Standard Plots</u> .....	175
<u>Cranston and Inkley Standard <math>t</math> Curve</u> .....	176
<u>deBoer's Standard <math>t</math>-Plots</u> .....	177
<u>Standard Thoria Plots</u> .....	180
<u>Standard Curves for Lunar Soils</u> .....	181
<u>Isotherms by Nicolau and Teichner</u> .....	182
<u>Isotherms Quoted by Bradley</u> .....	183
<u>McGavack and Patrick</u> .....	184
<u>Conclusion and some Comments about Carbon</u> .....	185
<i>The Observation of <math>\chi_c</math></i> .....	186
<u>Observations of the Energy Implications of <math>\chi_c</math></u> .....	187
<u>Direct Observation of <math>\chi_c</math> (threshold pressure)</u> .....	188
<u>Conclusion Concerning <math>\chi_c</math></u> .....	192
<i>Multiplane Adsorption</i> .....	192
<u>Examples of Two Plane Adsorption</u> .....	192
<u>The Freundlich, Dubinin-Polanyi and Tóth isotherms</u> .....	193
<u>Do isotherms for multiplane adsorption have anomalies?</u> .....	196
Example 1 - The Chi and the Disjoining Pressure equation .....	197
Example 2 - The BET method .....	198
<u>Conclusion Concerning Multiple Energies</u> .....	199
<i>Heats of Adsorption</i> .....	199
<u>Data by Harkins and Jura the absolute method</u> .....	200
<u>Data by T. Berg, Kr on Anatase - simultaneous measurements</u> .....	202
<u>Data by Kington, Beebe, Polley and Smith on Anatase</u> .....	203
<i>Adsorption of More than One Adsorbate</i> .....	204
<u>Adsorption on Non-porous Surface</u> .....	204
<u>Binary Adsorption in Micropores</u> .....	205
Lewis Rule Assumption .....	205
Binary Adsorption at a Constant Pressure .....	207
Comparison to Experiments .....	208
<u>Conclusions Regarding Binary Adsorption</u> .....	210
<i>Statistical Comparisons of Other Isotherms to the Chi Plot</i> .....	210
<i>General Conclusions</i> .....	211
<i>Chapter 5 References</i> .....	212
<b>Chapter 6 - Porosity Calculations</b> .....	214
<i>Introduction</i> .....	214

<i>Ultramicropore analysis</i> .....	215
<i>Micropore analysis</i> .....	215
<u>The BDDT equation</u> .....	215
<u>The DR and DA Equations</u> .....	217
<u>Standard Curve Analysis Using Distributions - Uninterpreted</u> .....	218
<u>Chi Theory Interpretation of the Distribution Fit</u> .....	221
Surface Areas and Pore Volume Calculations .....	221
Calculation of Pore Size Assuming a Geometry .....	221
Calculating $r_p$ from $\Delta\chi_p$ .....	222
Examples of Results .....	223
<i>Analysis of Mesoporosity</i> .....	226
<u>Comments about the Standard Plot of Determining Mesoporosity</u> .....	228
<u>The Broekhoff-deBoer (BdB) Theory</u> .....	228
<i>Is it Microporous or Mesoporous and Does it Matter?</i> .....	233
<u>Combined Mesopore/Micropore Equation</u> .....	233
<u>Microporosity calculations according by the Chi Equations</u> .....	234
<u>The Interpretation of Mesopore Equation Using Standard Curve</u> .....	234
<u>The Boundary Between Mesopores and Micropores</u> .....	235
<u>Does it Matter whether to Use a Micropore or a Mesopore Analysis?</u> .....	237
<u>Real Data Examples</u> .....	238
<u>What Does Chi Theory Say about Hysteresis?</u> .....	239
<i>Conclusions</i> .....	240
<i>Chapter 6 References</i> .....	241
<b>Chapter 7 – Density Functional Theory (DFT)</b> .....	243
<i>Introduction</i> .....	243
<i>What is a Functional?</i> .....	243
<i>The Functional Derivative</i> .....	244
<i>Correlation Functions</i> .....	246
<i>A Quick Trip through some Partition Functions</i> .....	247
<i>Direct Correlation Functions</i> .....	249
<i>The Hard Rod Approximations</i> .....	251
<i>Percus-Yevick solution Expansion for Hard Spheres</i> .....	256
<i>Thiele Analytical Approximation</i> .....	256
<i>The Carnahan-Starling Approximation</i> .....	257
<i>Helmholtz Free Energy from the CS Approximation</i> .....	258
<i>Non-local Density Functional Theory</i> .....	259
<i>Modeling with the Presence of a Surface</i> .....	261
<i>A note about the Monte Carlo Technique</i> .....	263
<i><math>\chi</math> theory versus NLDFT, what are the practical differences?</i> .....	264
<b>Appendices</b> .....	267
<i>Appendix I: Equipment specifications</i> .....	267
<i>Appendix II - Computation Programs</i> .....	300
<u>II C - Algebra of binary adsorption:</u> .....	305
<u>II D -Differential Equations for Binary Adsorption</u> .....	306

<u>II E - Surface liquid versus surface gas density</u> .....	308
<u>II F - The Error Function, etc.</u> .....	308
<u>II F - Lennard-Jones vs Harmonic Oscillator</u> .....	309
<u>II G - Algebra of the Inflection Point Method</u> .....	310
<u>II H - Precision and Accuracy of the BET Equation</u> .....	312
<i>Appendix III - Gregg and Jacobs' Table</i> .....	314
<i>Appendix IV - Conventions used in this book</i> .....	317
<u>Symbol List</u> .....	317
Greek, Roman, Italic and bold .....	317
<u>Subscripts</u> .....	321
<u>Superscripts</u> .....	322
<u>Embellishments</u> .....	322
<i>Index lists</i> .....	322
<u>Figure Captions</u> .....	331
<u>Table list</u> .....	335
<b>Acknowledgments</b> .....	337
<b>In Memory of Dr. E. Loren Fuller</b> .....	337
